## 1. General

This fireplace is a product based on a closed combustion system. It is designed to create a pleasant atmosphere and comfort in your living room. It is an efficient heating system that creates the impression as if you were in front of a real pen fire. Fireplaces with GAS combustion are based on the principle of natural chimney draft. For this system is needed to use two concentric pipes. The inner pipe ensures flue and outer pipe is used to supply air for combustion. The advantage of this principle is that the device does not need any air from the room and it operates independently of the house climate.

### 1.1 Transport and installation

- The INTERRA is transported in a horizontal position or if there are some problems – in angle-wise 45°. At first unscrew screws from the pallets. (see pic.1).
- You can use transport holders (optional) (see pic.2). For transport fix then on the both sides of the fireplace.

pic 1

pic 2

Opening and closing of the door

pull the leveller in your direction  
and open de window

**IF THERE IS GREASE OR SOME DUST LAYER ON THE GLASS (INSIDE OR OUTSIDE),  
CLEAN IT BEFORE USING GAS FIREPLACE. CLEANING OF THE GLASS IS THE ONLY  
MAINTENANCE THAT CAN BE PERFORMED BY CUSTOMERS.**

## 2. Installation

This equipment should be accompanied by experts and according to the latest regulations. Based on the specifications from your order, the device is designed for either natural gas or propane.

Before installing and commissioning the fireplace into operation, read the instructions and check local laws and this type of fireplace (indication of the type of gas, etc.) and whether the device is suitable for your installation conditions.

The installer must comply with the following requirements:

- The device must be checked for leaks and the elimination of the flue gas.
- The concentric pipes should be tested.
- The performance of the control valve, the ignition of the flame, the main burner, and thermocouple must be tested.

**This device has been designed as closed.**

**Closed (sealed) parts cannot be changed, therefore, it can be also used in enclosed spaces and spaces fitted with mechanical ventilation of the house. Even in houses with closed ventilation, where acts as a room heater.**

Remark: In some situation it is easy to install the fireplace with an optionally stand.

With stand

Without stand

### 2.1. Gas connection

**Connection can be performed only by qualified experts!**

GAS fireplaces come standard with  $\frac{1}{2}$ " GAS connection - pipe diameter of 12 mm. Welded connections with internal thread diameter of 12 mm is provided in accordance with CE standards. The connection is always on the left size of the fireplace. Make sure the pipe of the gas has no error before connected into the GAS fireplace. The device should be always connected to the locking tap, which is prescribed by standards and valid. It has to be always able to access to this locking tap..

**NEARBOX** : If you want to place the unit where there is not enough space under the unit, you can opt for a 'NEARBOX' gas unit that can be placed anywhere freely beside the fireplace. Make sure the gas unit is still accessible by means of a hatch.

**UNDERBOX** : Gas unit located below the unit and fixed.

## **2.2 Electrical connection**

These appliances are equipped with remote control for power supply 220 V. Always unplugs the appliance before you start the service.

## **3. Chimney installation (voir page 13,14 et 15)**

Installation of concentric tubes for flue gases must be carried out as specified in the manual. The only authorized tubes are from the brand ONTOP-Metaloterm. Our gas fireplace with ONTOP-Metaloterm has been tested and approved. Thus proper functioning of the gas fireplace is guaranteed just with ONTOP-Metaloterm.

Between the outer tube wall and wall or ceiling should be a minimum distance of at least 5 cm (it is the thermal protection against temperature of about 130° C). Transition of chimney extension front panel in the outer wall must be filled with silicone sealant.

## **4. Air flow**

Fireplace insert INTERRA can be ordered with or without pre-installed fan. This must be confirmed when ordering.

### **4.1 Natural convection**

Without fan you are not obliged to use the hot air vents. But if above the fireplace there is a decorative wooden beam or other combustible material you have to install Hot Air Vents.

### **4.2 Convection y means of a fan (optional)**

The Interra fireplace with UNDERBOX must be installed with the fan (preinstalled in the fireplace) and this to provide cooling of the electronics.

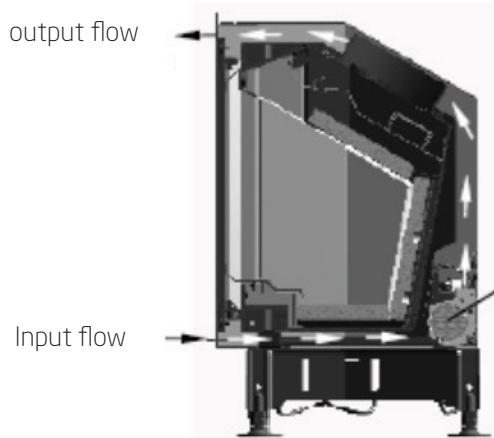

The Interra fireplace with NEARBOX : fan is optionam

If you choose the fan, the air will be drawn in from the bottom and subsequently blown through the convection casing. The fan is mounted on the back of the appliance. By removing inside panelling on the back and unscrew the metal plate behind this inside panelling, it's easy to have access to the fan.

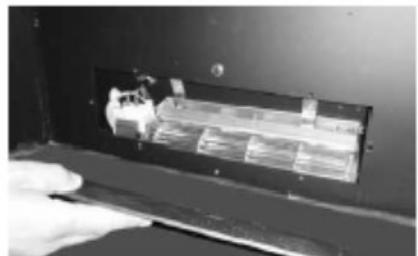

When using a fan it is not obligatory to connect air ducts.convection

#### 4.3 Fan (optional).

- The fan (optional) starts automatically when a temperature of 50°C is reached, and switches off again automatically when 30°C is reached.
- The fan (optional) stops automatically working when you open the door.  
This is fully automatically working fan. There is no used a Dimmer or Speed Controller for the fan.

to access the fan, take away the chamot and remove metal sheet metal

The left side of the device is standardly the side for 220V power connection. There is possibility to ask and have it on the right side of the device

#### 5. First use

The walls and cladding on newly surrounds the fireplace contain large amounts of moisture, which have to be first evaporated before putting the fireplace into operation. If not, plastering and cladding flaw or can be separated. Ask your installer how much time is required for drying. For the first time do just a small fire. (What means level 1-5 on the remote control)

At the first ignition may occur unpleasant smell. The smell comes from the protective paint. These odors are harmless. To eliminate it is sufficient to ensure adequate ventilation rooms.

On the glass may be formed light coating after first firing. This is the colour. The glass can be cleaned using a cleaning product Bio-Clean M-Design after cooling the appliance. The product may later be used to clean the glass door.

The fireplace must not be used if the door is without glass or if the door is open. If the glass door is cracked or broken, it must not be used until the glass is replaced. In this case, please contact your M-design seller.

## 6 Security and maintenance

At least once a year make the equipment checked by a qualified professional.

Follow the next points:

- Enclosed equipment produces very high temperatures, what means that all the external surfaces (metal frame and glass) are after some heating time very hot. Ensure that small children do not touch the glass, because it can cause burn injury.
- With GAS fireplace are delivered either with ceramic wooden logs, ceramic stones, diamond or sapphires. Never place other objects into the combustor.
- Flammable objects put enough away from the fireplace (at least 1 meter)!
- Never change the settings by yourself, because this leads to void the warranty. The warranty will not be valid.
- The remote control should never be used by children without supervision/control.
- Always keep startpilot on. The device is designed that the flames goes out automatically after every 24 hours, and immediately turned on again. This enables the electronic system discharge of static electricity.
- If the burner goes out for some reason, wait 3 minutes and then try to turn on the device again

## 7. Guarantee

### 7.1. Terms and items covered :

8 years guarantee on the main structure

2 years guarantee on the parts

1 year guarantee on the fan

No guarantee on glass, seals and lining the combustion chamber

### 7.2. Provision

This contract ceases to be valid if the instructions and guidelines of these operating instructions were not followed. Indemnification during the guarantee period will take place only through the supplier's mediation upon presentation of the invoice of purchase. Parts will be delivered only in replacement of defect parts.

### 7.3. Disclaimer

Damage, loss and related disorders :

- Improper installation, incorrect connection.
- Transportation and installation.
- Incorrect usage.
- Insufficient maintenance.
- All internal adjustments or reconstruction device.
- Costs for packaging and transport.
- All costs not pre-arranged with M-design.
- Costs linked with misuse or abuse of the appliance.

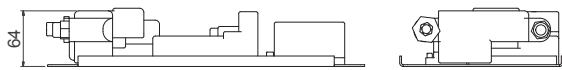

Serial number:

Open the door. Above the left corner, behind the bended metal sheet you can find serial number.

## 12. Installing the chimney

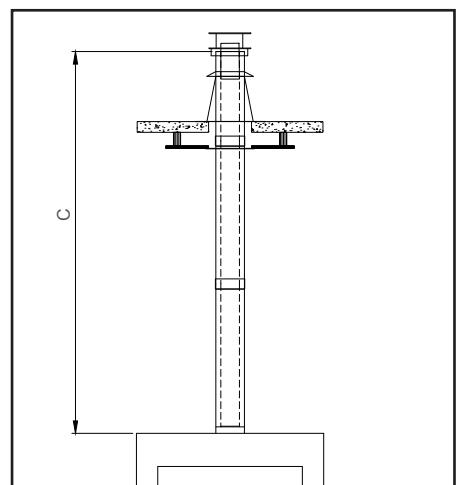

Install the concentric flue duct as indicated by ONTOP - METALOTERM. The only authorised pipes are ONTOP Metaloterm™. ONTOP-METALOTERM tested our appliances with their conduct and we only guarantee a good working of the appliance with those. Between the external wall of the pipe and the wall or the ceiling, you should allow for a clearance of at least 50mm and protection that is suitable against temperatures of around 130°C. The passage of the front panel cowl in the external wall must be filled in using silicone mastic.

Pic. 1 Roof exit ( $c_{31}$ )

This is recommended with a roof exit  $\geq 3m$

<b><math>\varnothing 150/100</math></b>		
Appliance	$C$ (min)	$C$ (max)
Interra 60-68	4 m	18m
Interra 74	4 m	18m

<b><math>\emptyset 150/100</math></b>			
Appliance	A (min)	B (min)	B (max)
Interra 60-68	1 m	Wall exit	A+8m
Interra 74	1 m	Wal exit	A+7m

Important : Be carefull every horizontal part does not have a negative inclination in direction of the outlet. It is even better, when possible to have a little inclination of 2 or 3 degrees ascending to avoid rain and condensation in the tube. Install wall outlet like fig 1

Pic. 4 Roof exit with bend

Pic. 4

### **Ø 150/100**

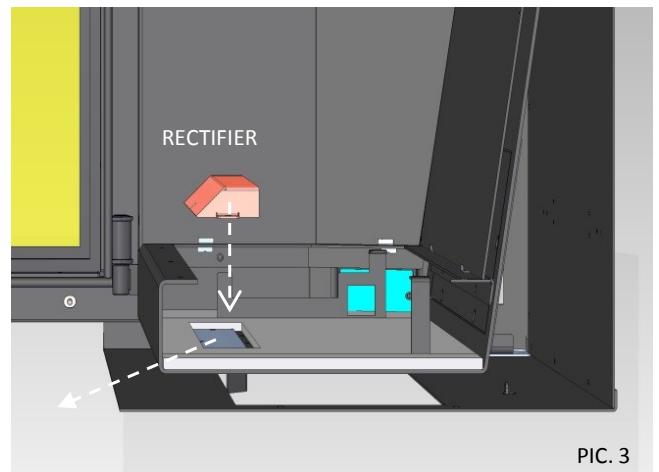

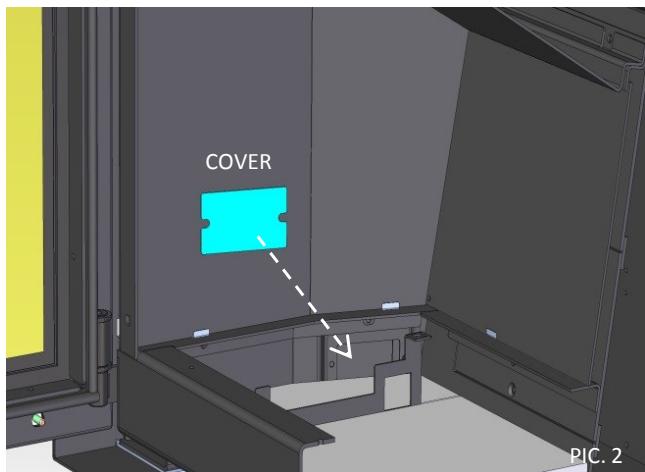

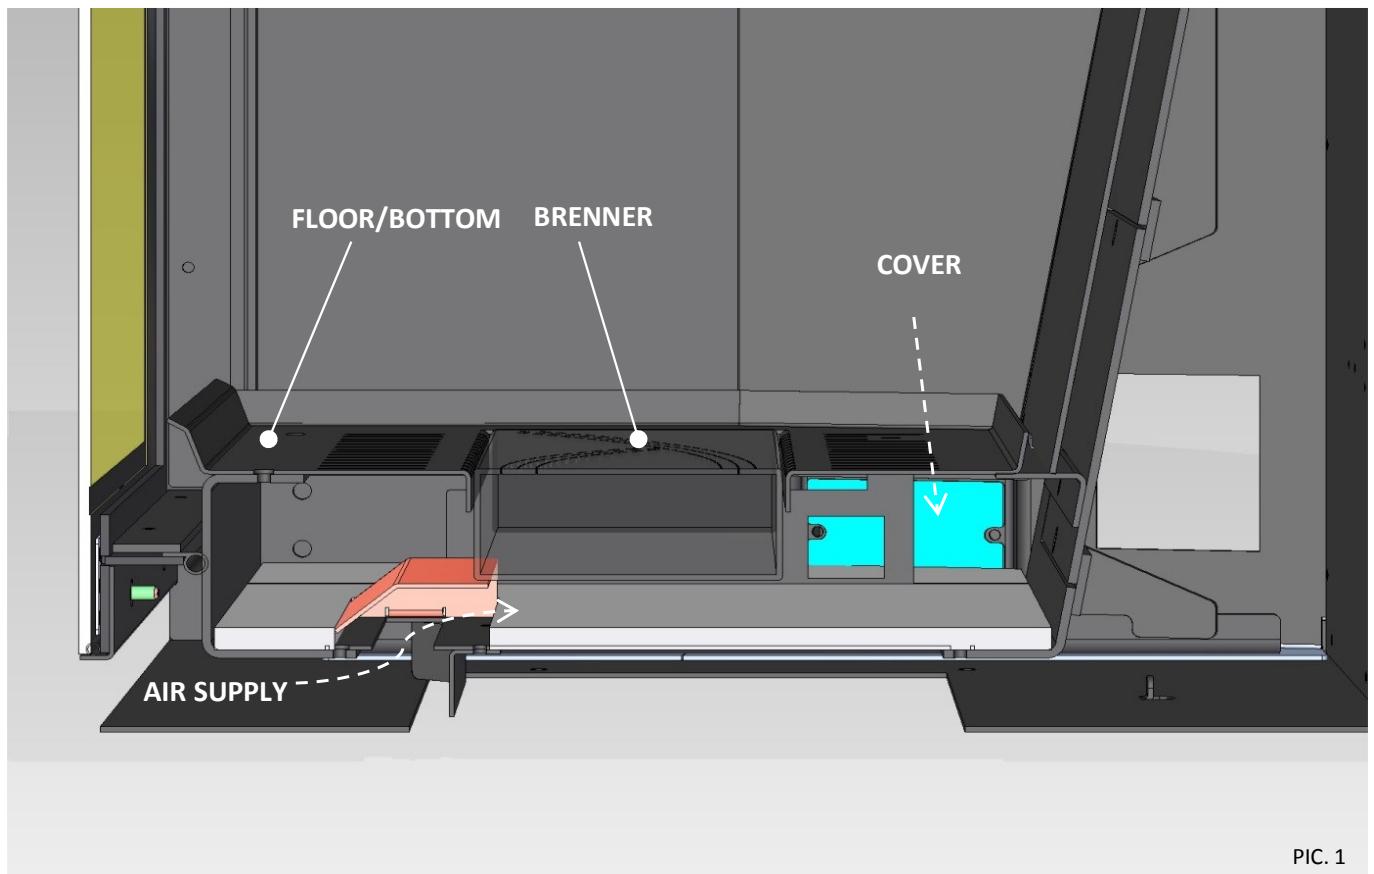

Appliance	A (min)	B (max)	C (min)	(A+B+C)max
Interra 60-68	1 m	A+C	B-A	16m
Interra 74	1 m	(A+C) -0,5m	B-A	15m

### **Ø 150/100**

Appliance	
Interra 60-68-74	for each 90° bend subtract 1m horizontally or add 1m vertically
Interra 60-68-74	for each 45°/30°/15° bend subtract 0,5m horizontally or add 0,5 m vertically

## 13. Modification to the internal air supply (air from the room)

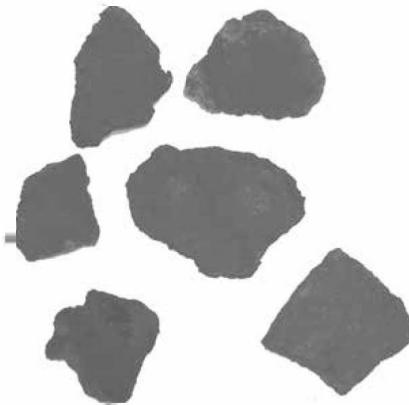

1. For modification to the internal (bottom) air supply dismantle the floor. (note: for better access and manipulation you can dismantle the burner too).
2. Screw cover on the holes in the side. (pic.2)
3. Remove the insulation and replace the rectifier with cover on the middle shield. (pic.3)
4. Mantle the floor and burner back.

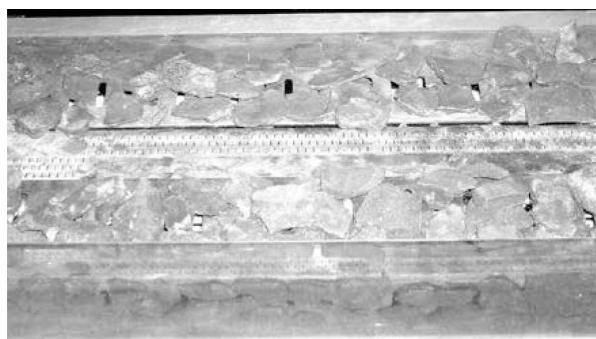

## 14. Setup woodlogs: Interra 60-68-74

- Please check that the pilot light is switched off and that the furnace has cooled down.
- Open the window
- Arrange the materials supplied. There is an adequate supply of materials . Our appliance is approved with these materials, so please do not use other products. Other decorative products are prohibited in our appliances. Please do not change the delivered quantities.

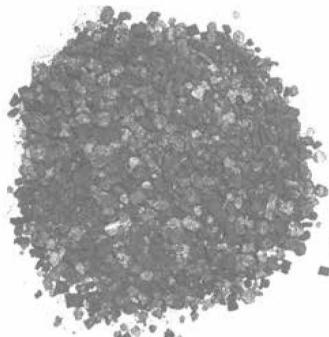

Caution: do not put anything on the pilot light. To arrange the logs respect the order as follows.

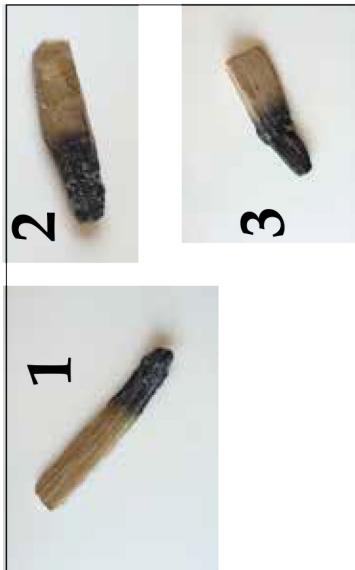

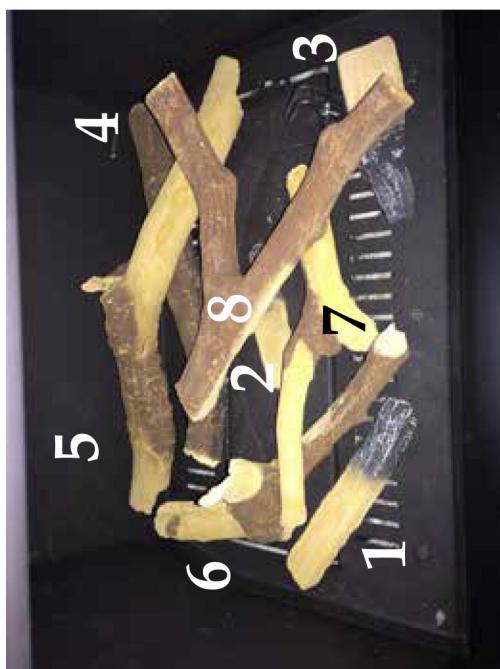

Put the big immitation coal pieces around the burner.

Put the little imitation coal pieces on the burner en here and there around the big coal pieces.

**INTERRA**

INTERRA  
60-68-74 Gas/Gaz

## 1. Initial start-up (registering remote control)

Press and hold the menu  button until 24:00

appears at the top left (1).

Press briefly  until you see "bnd" displayed (2).

This screen is visible if the remote control is not logged in. The symbol  flashes. Ensure that the power of the fireplace has not been switched on for more than 5 minutes and start logging in :

Press buttons  and  simultaneously until you see the following screen

## 2. Lighting the fireplace

At the same time, briefly press  and 

You can hear the ignition pin ticking. The ticking lasts about 8 seconds. When first used, the burner may not start immediately because the pipes have not yet been fully bled. You can try this up to 5 times before the appliance comes to safety. If this fails, please contact your installer.

## 3. Manual control

When starting, the burner will ignite.

From the moment you have a flame, you can start setting the flame height.

The screen automatically switches to manual operation (flame height control).

Press  until you see the number 15.

This is the maximum flame height.

You then select a flame height with the

 and  buttons from 1 to 15

## 4. ECO WAVE

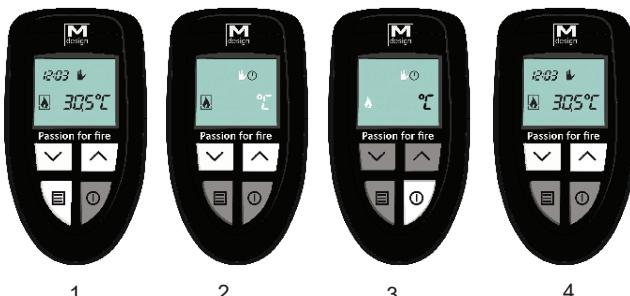

**ECO WAVE** : Each model is supplied as standard with an ECO-WAVE

ECO-WAVE is an automatic cycle of fluctuating flames

With every restart of the fireplace, the fireplace in ECO-WAVE

## 5. Thermostatic setting

Switching off fireplace :

Press once  to switch off the fireplace. The fireplace will start up with 1 or more burners depending on whether the "b" options (press 2x on the menu key) is set to "0" or "1".

If you want to switch to thermostatic control, proceed as follows:

Press the menu key  3 times until you get to the screen with symbols according to figure 2. Press  or  until you see symbols  and  flashing (2).

Confirm the selection by pressing (3) .

You select a temperature with the  and  buttons (4).

Do not place the remote control close to the fire. The temperature probe is inside the remote control.

To go back to the flame height, follow the same steps until  and  flash.

Confirm your selection with .
